

MRN APPROACH TO PATIENT-CENTRIC CLINICAL TRIALS

INDUSTRY CHALLENGES

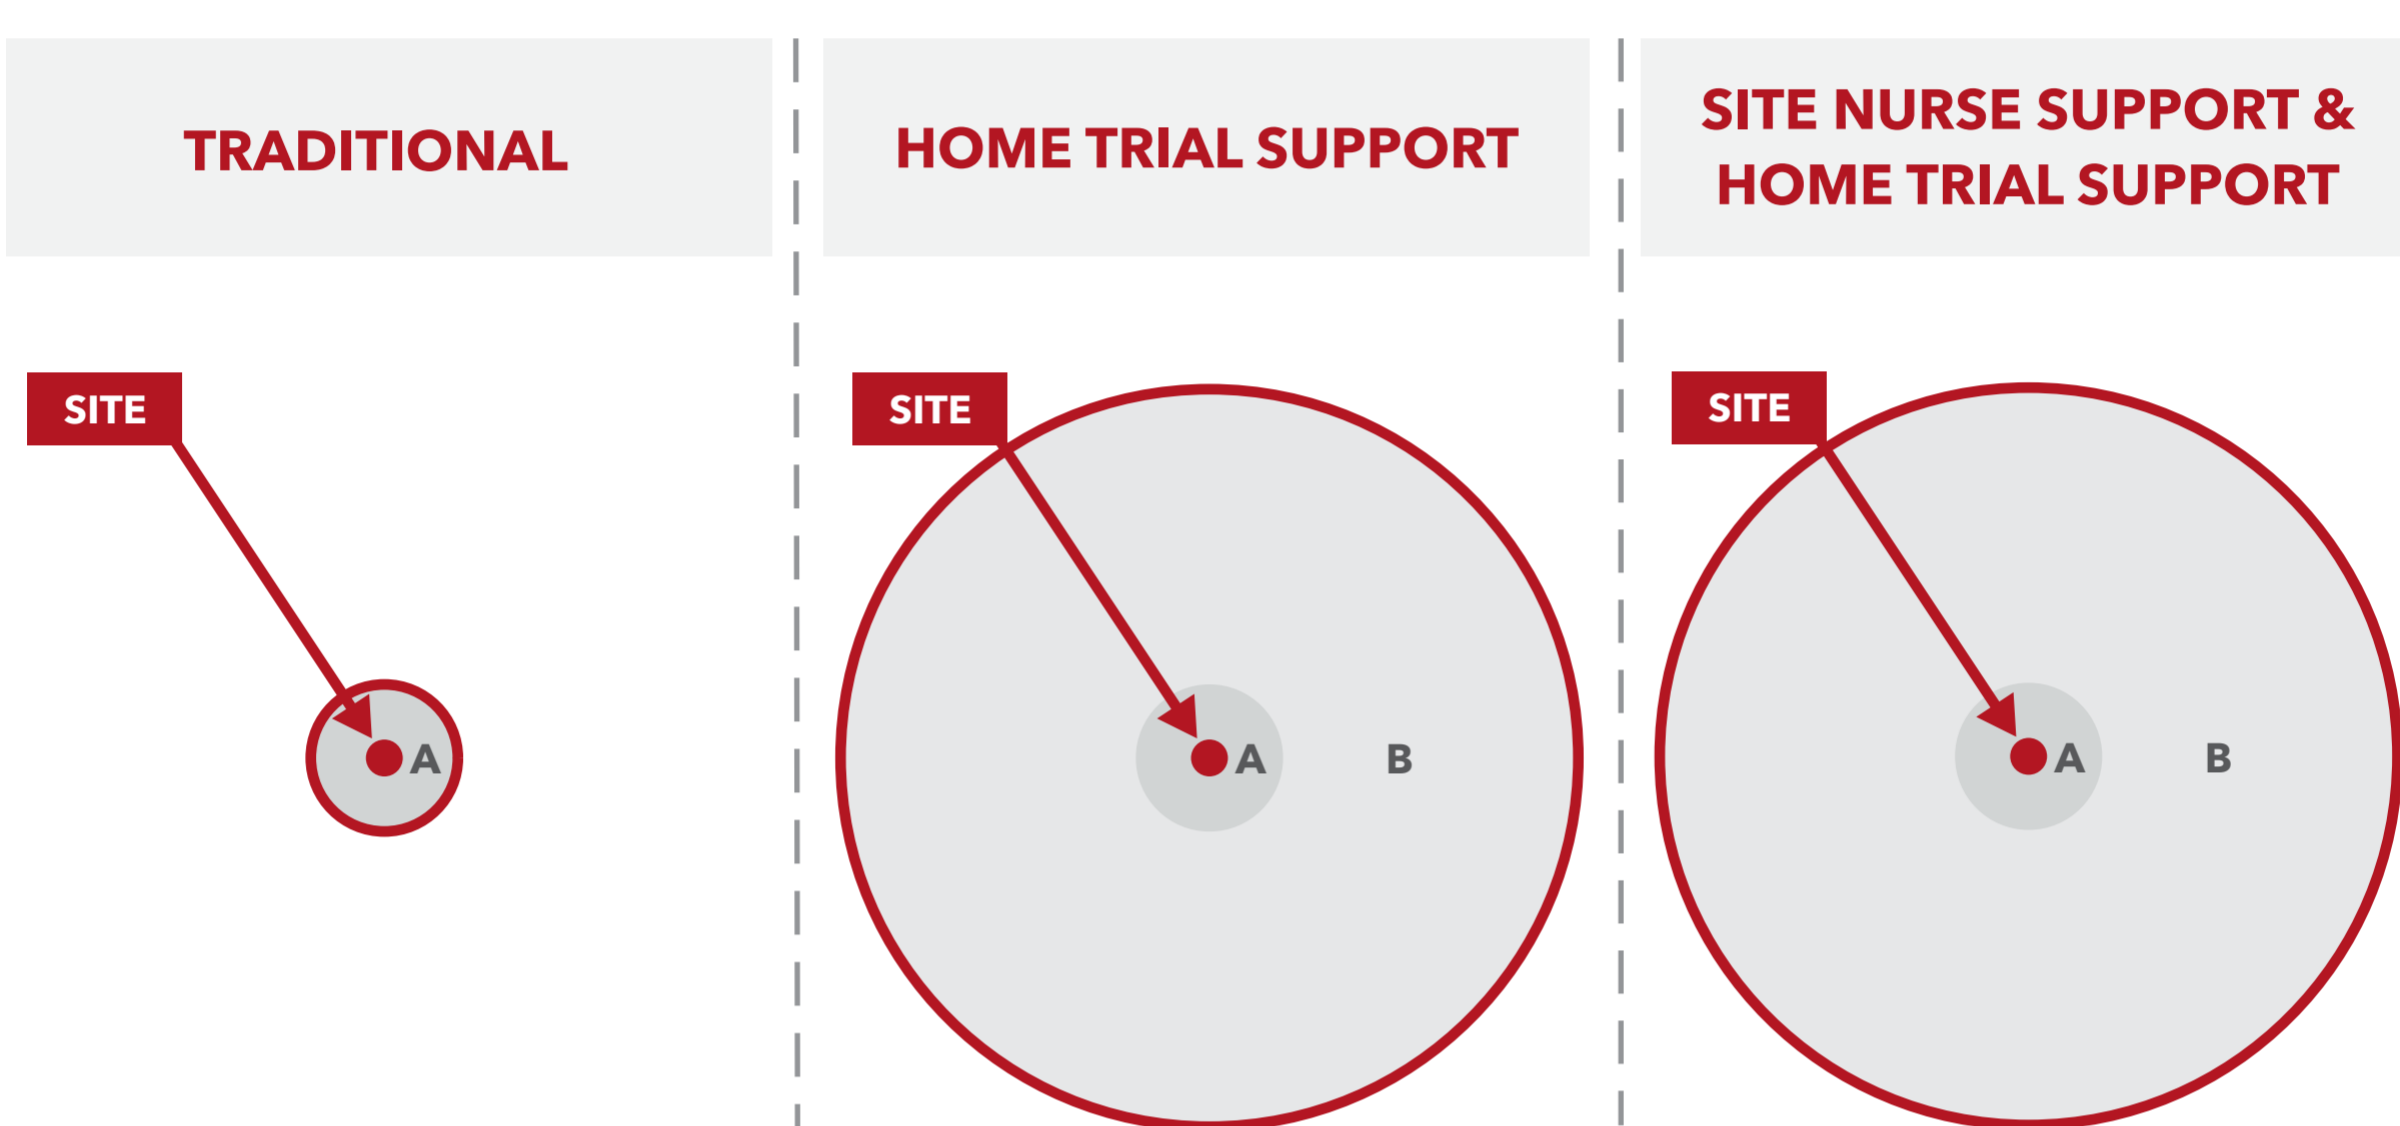

*Estimated for Pharma Sponsored Clinical Trials

PROCESS COMPARISON

THE IMPACT OF GREATER REACH

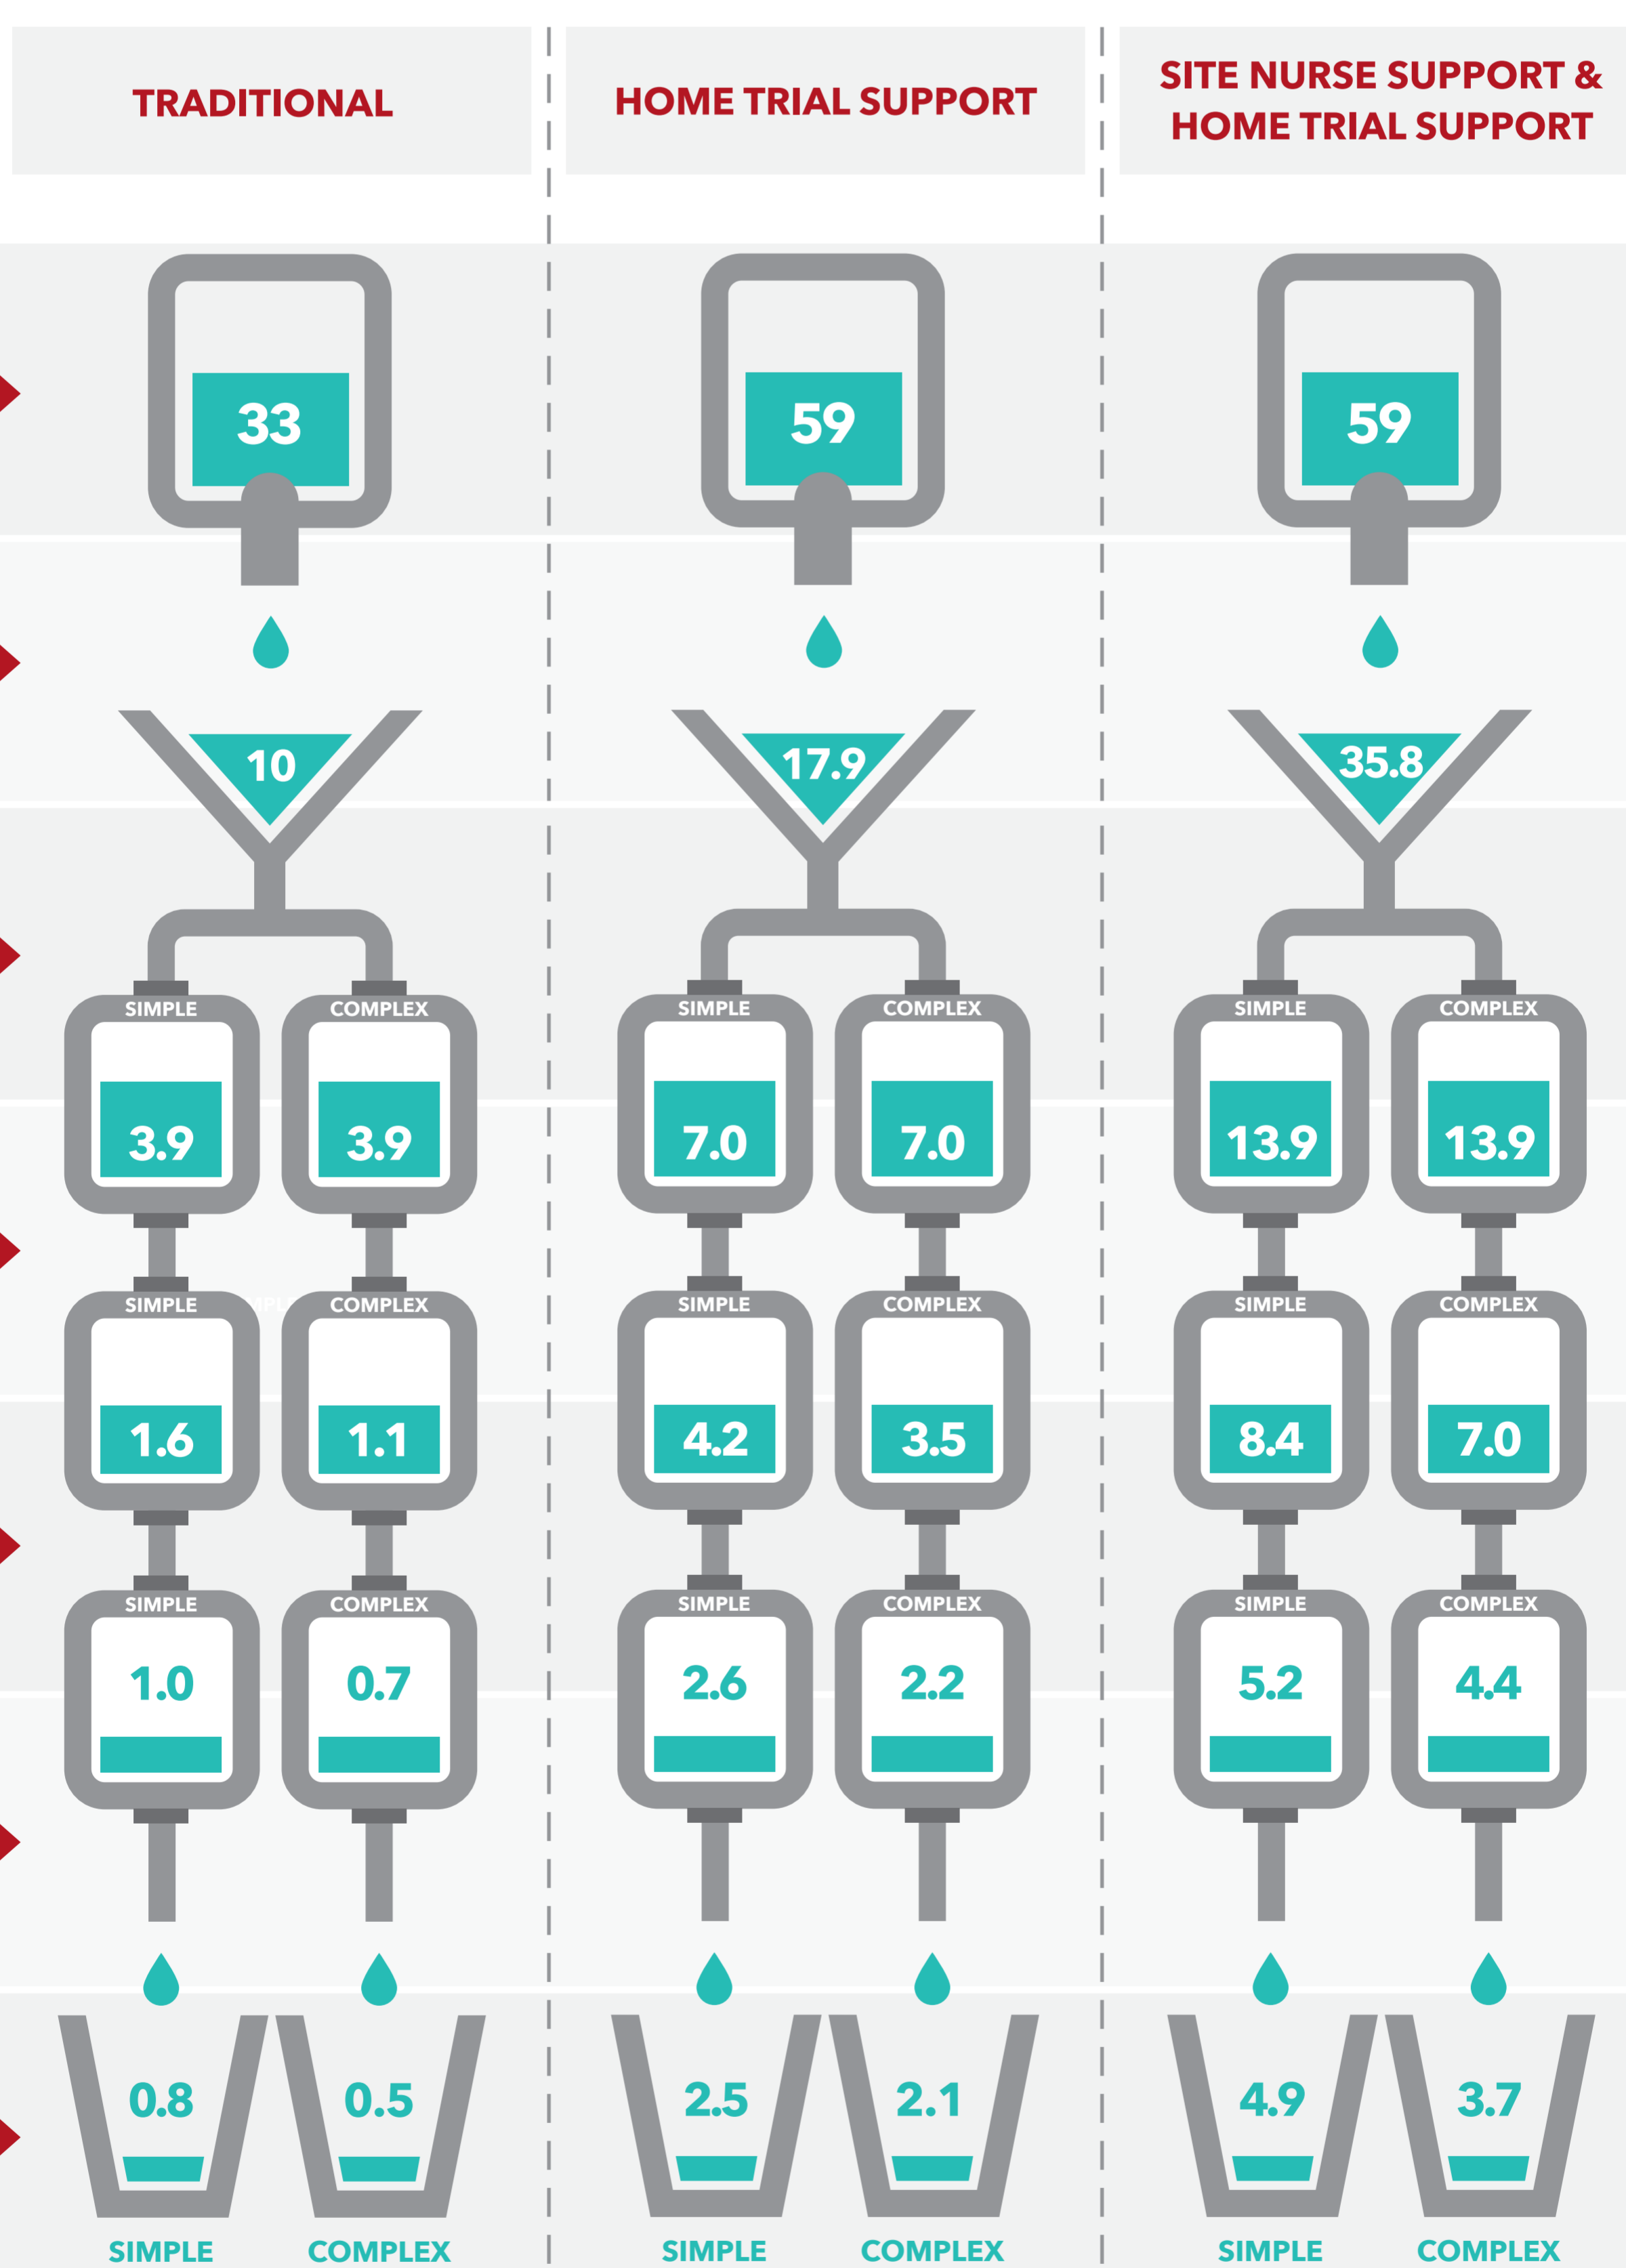

Home Trial Support allows recruitment of patients living further from the site.

| ZONE | RADIUS | POPULATION DENSITY | % POPULATION ACCESSED | PATIENT POOL AVAILABLE |
|------|----------|--------------------|-----------------------|------------------------|
| A | 10 MILES | 160 | 100% | 33 |
| B | 50 MILES | 3100 | 180% | 59 |

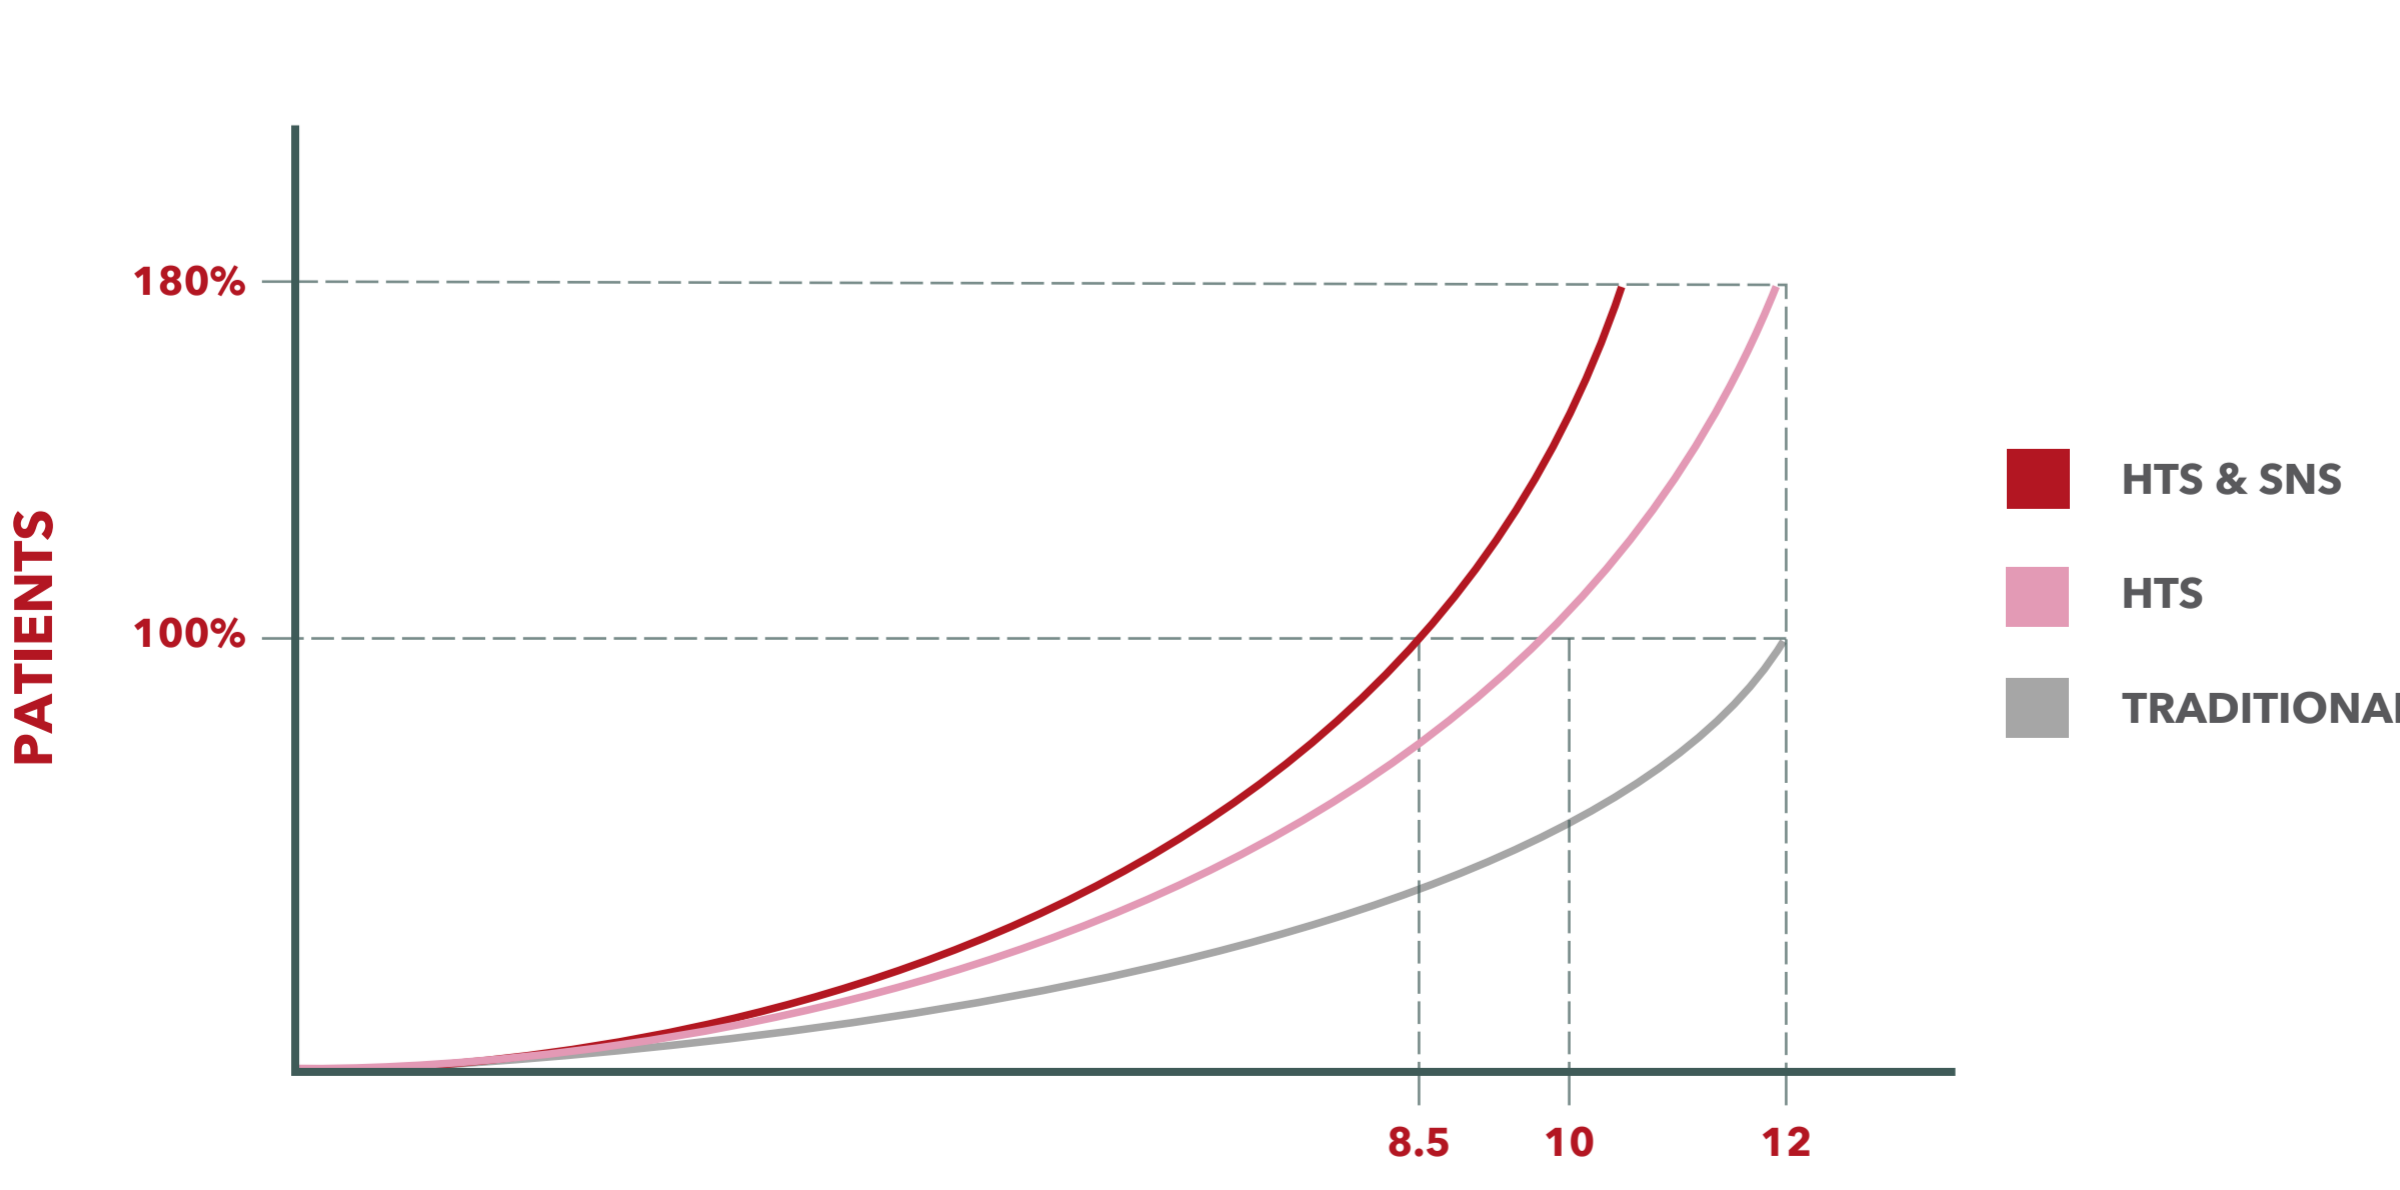

PATIENT RECRUITMENT & RETENTION

Implementing Home Trial Support allows sites to recruit patients from a wider geographical region and therefore reach a larger patient pool, as well as increase their consenting and retention rates. Implementing Site Nurse Support in parallel ensures sites have a dedicated resource to identify and screen patients from the increased patient pool effectively. The combined impact of these services can result in up to 600% increase in completed patients per site.

SIMPLE: Blood draws and data collection **COMPLEX:** IMP administration, blood draws and data collection

RECRUITMENT RATES

MRN is the largest nursing provider in the clinical trials sector, covering over 38 countries worldwide, with innovative tools to deliver your projects.

We specialize in the **COMPLEX**; studies with large numbers of countries, studies where IMP needs to be delivered in the home, as well as studies with difficult patient populations - specifically paediatrics and rare diseases.
